### Mines and Mining Stocks

Copper-Silver Ore in Emanci- Report of Carbonate Ore in Withdrawal of Oil Lands From pator is Best in Lowest Tunnel.

traced several hundred feet to its in-tersection with the great iron vein which courses through the property and which appears to be the mother lode.

Brings Fortune "In Sight." Developments on the Emancipator vein indicate that the company has 150 feet of stoping ground upon an ore shoot which appears to be continuous for at least 600 feet on its strike. This proven would mean at least \$500,000 of ore in sight above the 150-level, with almost a sure thing that the high

of ore in sight above the 150-level, with almost a sure thing that the big mine lies deep.

In addition to this, the company is sacking \$100 ore in two raises from the lower tunnel on its bonded property, on another vein, where \$10,000 of high grade ore was shipped from above the 35-foot vein. There the upper level was run on the faulting plane and the lower tunnel has opened the ore in place at 75 feet greater depth.

With men working in five places in ore, more than two tons a day of the high grade is being sacked for shipment. Teams began several days ago to haul the ore to Wendover station, with close to two carloads ahead.

San Francisco Quotations.

Mine Advances Stock-Others Steady.

Tunnel.	Others Steady.	There Monopoly.	yer gro
Finding rich copper-silver ore at the greates depth attained in its Emancipator vein, gives the Silver Island Coalition company assurances that it has the making of a permanent mine. Samples received yesterday from the latest strike, in the lowest tunnel on that vein, run close to 40 per cent copper and not less than 500 ounces in silver to the ton, and it is said that there is a minimum width of eight inches of that class of ore.  The company has started three tunnels on the Emancipator vein, on a mountain side which slopes at an angle of about 45 degrees. The first tunnel is near the top of the mountain,	Mining stocks were steady yesterday, with a tendency to strengthen toward the close. Provo Mining sold from 8c to as high as 11c upon report that a second strike has been made in the mine—this time a body of carbonate ore having been encountered. Closing sales of the stock were at 10c, Grand Central was strong, the only sale recorded having been at \$2.30. Colorado held at \$1.25 to \$1.27½, Iron Blossom went from 70c to 65c, and closed at 67c; Sioux Consolidated sold from 64c to 59c, and closed at 63c; Columbus Consolidated brought 80c to 82c, and Uncle Sam was quiet at 51c.  Total number of shares sold, 140,600; value, \$30.845.75. Closing quotations and the day's sales:	Withdrawal from entry of all lands in the San Juan oil fields not already located, in the opinion of A. H. Spencer of Denver, gives to companies with holdings there almost a monopoly upon one of the greatest oil fields in the world.  "It has already been demonstrated," he says, "that the field has seven rich sands within the first 1,500 feet in depth, and it is also known that the sedimentary deposits extend downward for not less than 3,000 feet and that gusher possibilities will likely be encountered with greater depth. Wells are producing as high as 600 and 800 barrels daily at this time, and the oil is all of a paraffine base—the highest	ing ble eng con wir mer dep Town are pur from Con tak be T fee

Mining Notes. H. S. Peters, well known Goldfield operator, is in the city on mining business. Henry Krumb, consulting engineer for Inspiration and other Gunn-Thompson companies, has just left New York for the mines in Arizona.

the mines in Arizona.

R. P. Coleman, who has just returned from Ely, confirms reports which have come from that camp of great local interest in merger developments, started by the Cole-Ryan people and apparently taken up by some other large interests. Business men, mining men and laborers, he says, are all buying freely the stocks of every smaller company which appears to be in line for a consolidation. New ore developments appear likewise to justify on their own account much of the increased interest in stocks, so that there is good chance for the movement to be per-

Giroux Formation in Its 1,000-Foot Shaft Attracts Large Interests.

Stock of the Boston Ely Copper company is likely to sell for two or three times its present price before the end of the year is the prediction of the copper expert of the Boston Commercial. The company lately had an offer for its property from very strong interests owning adjoining ground who want it for a consolidation, he understands. The management, seeking to ascertain whether it was advisable to sell, employed a well known mining engineer to examine the property. After completing his examination the expert wired the management: "Latest developments practically assure sulphide zone at depth."

The only "very strong interests" who own ground adjoining that of Boston Ely are the Cole-Ryan interests. Their late purchase of the Rickard Ely gives them virtually everything on the Giroux zone from the Boston Ely on the west to Ely Consolidated on the east, so that their taking over both of those properties would be logical.

The shaft in the Boston Ely is down 1,000

ther possibilities will likely be entered with greater depth. Wells producing as high as 600 and 800 tels daily at this time, and the oil li of a paraffine base—the highest ie petroleum known."

The shaft in the Boston Ely is down 1,000 feet, and the last 135 feet of sinking, it is said, has been in formation precisely known experts of the country. Demming has 96 wells to his credit no failure checked against him, coming through the San Juan secand in studying conditions carety, he came to the conclusion that the fields must not be less than 300 is in length by 50 miles wide. The prospect is that the limestones of the Ely district will be found to carry large bodies of rich smelting ore similar to those of the Bisbee district. The companies opening ore of that character in Ely district will be in position to begin shipping immediately to near-by smelters and earning substantial profits.

That residents of Ely take seriously the new movement in that camp, especially in the newer properties, is indicated by the avidity with which they took over the first of the week an offering of treasury stock by the Ely Calumet Copper company. That company gave notice the day before placing the stock on the market, and before noon the following day the entire block of 40,000 shares had been taken, while nearly every broker in town, it is said, had orders which could not be filled. The Ely Calumet company's group of said, had orders which could not be filled. The Ely Calumet company's group of claims is bounded on the south by the Ely townsite and on the north by the estate of the Ely Resurrection company, which has opened four feet of pay ore in the great iron-capped zone which courses north and south through the limestone formation. The Ely Calumet recently gave an option upon eight of its claims at the northern end of its group, presumably to the Cole-Ryan interests, and has started development of a portion of the remainder of its holdings. The outlook for these operations is so favorable that its treasury offering was taken almost its treasury offering was taken almost as quickly as it could be proffered. A force of twelve men, with machine drills, has been set to work in Calumet drills, has been set to work in Calumet ground driving a 1,900-foot tunnel to get under the big mineralized zone. So strong are the indications that a large body of good smelting ore will be opened that the Steptoe smelter management has spoken for the mine's output. in the event that 100 tons a day can be provided.

CENTRAL STANDARD IS OPEN BOARD FEATURE

Bingham Central Standard was yes-terday in strong demand on the open board, with 2,000 shares at 35c to 37c. The strength is due to advices that financing plans for the merger company, Utah Metal, are being closed. Sales of other unlisted stocks: Pioche King, 100 at 16c; Federal Ely, 500 at 10c, 1,000 at 8½c; Opex, 1,500 at 20½c.

HEINZE DUE IN WEST TO LOOK AFTER INTERESTS

F. A. Heinze is coming west this week for the first time in two years, the New York district attorney's office having accorded him permission to make the trip to look after the affairs of his corporations—the Davis-Daly Copper company, United Copper company and Ohio Copper company.

Although dragnet subpoenas are out all over the United States for evidence against Mr. Heinze, all the indictments obtained against him have been dismissed except upon one count, dictments obtained against him have been dismissed except upon one count, which is that of over-certification, says the Boston News Bureau.

His friends who are familiar with the facts state that this is a technicality, the loan and the certification having been made at the same time, although the bank force may have failed to make the entry of the loan before making the certification.

**NEW CORPORATION TAX** IN EFFECT THIS YEAR

The federal tax on corporation incomes, imposed by the late session of congress, accrues for the current year. The law provides for a tax of 1 per cent upon all net earnings in excess of \$5,000 annually. It applies to incorporated mining companies as well as to all other corporations, and every corporation legally in existence, whether actively operating or not, must reer actively operating or not, must return a sworn statement relative to its annual net earnings within sixty days from the close of the year.

Work of Winter Will Be to Prepare for Smelter Run.

Work during the season of 1909 at the mine of the Lost Packer company, at Ivers, Idaho, according to the report of Secretary Henry Welsh, just issued, was confined to development, assessment work on the various claims where

ment work on the various claims where needed, constructing power ditch, roads and sawmill. The work determined upon by the directors of the company to be performed during the coming winter is that of placing things in readiness for a smelter run during the season of 1910.

Developed in the mine at this time, according to the report, are 1,000 tons of first-class ore, estimated value \$50 a ton, and approximately 10,000 tons of low grade ore of the estimated average value of \$10 a ton, besides 4,000 tons of \$10 ore on the dumps.

All of the stopes from which first-class ore has been stoped are filled with the low grade material and high grade silicious ore found in the vein. No effort has been made to reduce the silicious ore, on account of the ex-No effort has been made to reduce the silicious ore, on account of the excessive cost of coke delivered at the company's smelter, but with assurance given that a railroad is to be built up the Salmon river, those ores assume a higher value and must be considered among the company's assets.

No estimate of tonnage is made of ore exposed below the No. 4 level, owing to the limited development accomplished. The alm has been to find the ore on the various levels as early as possible, leaving the blocking out to be done later.

Smelter Run Profitable.

Smelter Run Profitable. The building of the railroad, the line for which is being surveyed up the Salmon river, will, it is believed more than double the value of the company's property. The long distance to freight fuel and other supplies, and the short seasons between snows, have been the only drawbacks in the way of making the mine pay handsomely. During the company's smelter run of 1908 it produced sixteen carloads of matte, weighing 1,441,775 pounds, which was shipped to the Baltimore Copper Smelting and Rolling company. The matte contained 7,826 ounces of gold, 19,053 ounces of silver and 773,247 pounds of copper, all of which netted the company \$218, \$966.20.

The company's total expenses from the East Tintic Development company to Sontenbar 1, 1908.

The company's total expenses from October 1, 1908, to September 1, 1909, was \$29,635.71. Its credit balance at the bank October 5, 1909, was \$11,-902.75.

rather freely.

C. S. Trench & Co. of New York say regarding the market:

"A little while ago the bulls were only predicting 6c, but now that the market has passed that point, and as the demand for the metal is growing, and as the market is as closely controlled as ever, new predictions are being made that spelter will seil at close to 6½ before the end of the year.

"Everything has favored the manipulation to which the metal has been lately subjected, and the position has become a strong one on account of the phenomenal revival that has taken place in the iron and steel trade, which is bringing a very heavy demand from galvanizers, undoubtedly at present taxing our producing capacity o its utmost. Even allowing for a somewhat larger output of zinc ore from the Missouri and Wisconsin districts, the Mexican ores, excluded by the new tariff, are going to be seriously missed, for it will take almost a year for Joplin to increase its output 1,000 tons of ore a week."

It has not been fully uncovered.

The point where the strike was made is within twenty feet of the south end is within twenty feet of the south end of the Provo ground and within the same distance of the north end line of the East Tintic.

PIOCHE DEMIJOHN IS

NEAR SHOOT ON 200

Good reports continue to come from development in the property of the Pioche Demijohn Mining company, where the drift on the 200-foot level is apparently not far from the shoot of high grade ore which was opened on the 125-foot level. Bunches of the lower drift and the management would not be surprised to at any time break into the solid body.

New Kind of Ore Is Discovered on the Three-Hundred-Foot Level

last week was the same as that shipped from the East Tintic Development company's mine, consisting largely of galena. It was found in the east drift of the 160-foot level. po2.75.

ZINC'S POSITION STRONG.

Boston, Oct. 27.—The price of speiter is still advancing, and it is now 6.25 cents a pound.

At this price the American Zinc, Lead and Smelting company is selling rather freely.

C. S. Trench & Co. of New York say regarding the market:

"A little while ago the bulls were is the 160-foot level.

The strike uncovered today in the 300-foot level is like the ore from the Sioux Consolidated, consisting of lead carbonates that run high in silver. The only previous indication of the presence of this kind of ore in that vicinity was when the East Tintic struck a fissure running north and south. Two is already exposed by the new strike and it has not been fully uncovered.

The point where the strike was made is within twenty feet of the south end
